I have once tried a mod, where you could play a character who shot many Proximity mines out of a rocket launcher, and they flew really long and then exploded...

And another character Could shoot a blue beam which would stay at its position for a couple of minutes...

You could create a nice shape out of it,  
but i really cant find this mod anymore

Any1 heard of it?

Maybe some1 know where to find it?

It is really fun >.<
