Can we download this mod? I'd like to test it, my kid has played here a lot over the last couple years on the old l4b server too. I'd like to see what it takes to host it. I see it lagging and crashing every now and then. I noticed it looks to be hosted on a home pc/server or something because SFPS/pings always drops when there seems to be more players.

If I could get the mod, I'd most likely host it for free and of course you would have full rights over the server and FDS. It will be hosted on a dedicated/leased machine in a Datacenter, with direct connection to the internet, so bandwidth/sfps lag will not be a problem. I know it will not help with crashing from code, but that's something I can't fix and I'm sure all that play can deal with as long as it runs smooth normally.

If I host it, there will be no RDP, but full access to Server folder via FTP. I'm at work, so I dunno what bot it runs, since cloudy does not let you restart it via IRC, I can add it to my scripts so you can start/stop it from IRC...that is if you are using cloudy. Depends all on the bot.

I've looked around for this mod but couldn't find it. I didn't look too hard, but after reading some, I assume that it is not released to public users. If I get it, I can assure you, it will not be leaked out.

Lemme know what you think please.

Thanks for reading this long Arse post.
