Nope i can't load into anything.

I'm pretty sure its something to do with some driver update.
When i go on "Windows Update" and update XP, XP gets buggy after that.
Before i update XP everything is fine, so it has to be something that Windows Update updates..
(sounds confusing really)..

I've just reformatted again to see if it works, but alls im going to update is DirectX to 9.0, so
nothing else will get updated. Hopfully this will fix

Fingers crossed
