ok there is logonstudio for vista i think.

And I'm sorry to say but i will say it again i did not make this log in screen some other fan did but I'm learning how so i can start making them.

dthdealer:if you make that pick 640x480 i will make you a boot skin for that. now the boot skin's I'm making are going to have nod gdi what ever but windows xp can't handle anything that is above 16 4 bit crap so the boot skins are not that cool but you should see some of them that people make.

oh dthdealer i will try to make the boot skin for you and test it out.
and i need to know what you want for the loading bar you know the little blue bar that is under window's.

Going to look for wallpapers to convert to boot skins and try to learn how to make log ins.

oh u6795 do you got msn or xfire? so we can see if that log in works on vista i think they all work the same.

i don't have vista so you guy's will have to let me know if the log in works so let me get the program.

so I'm out.... for now

update:
Hows that look u6795?

Here is the matching boot skin to that log in my way tho

And here is the vista log in studio
does anyone have a place i can upload this file?
