---

Hi Renegade-Guys,  
at first sorry for my bad english

I want to install my first renegade server.

I have installed the RedHat 8 Edition and XWISP 1.0 Beta (xwisp-pol2.pl) now it works on WOL (should be) but I also want SSAOW for example or the CP2 or bRenBot...

But after anything else (./xwisp-pol2.pl) doesn't work looks like that every mod use another scripts.so but I'm not sure.

I'm very new with that hole lfds thing but I think to know that i need XWISP for listing the Server in WOL but I want SSAOW vor the big crates for example.

So can someone give me a link or a little instruction ?  
Would be really nice.
