EA-DamageEverything wrote on Thu, 16 October 2008 03:34For a simple wordlist with warn/kick/ban option, use the Nightregulator. It has this built-in ever since it was born.

What's really innovative: Replacing bad words on-the-fly with &%§"&%¨š or something similar. Like in the comics I read in my childhood.
It's not really innovative, BlackIntel/TheKOSs2 have that for a while now, and I think that Stewie released a dll which does exactly that, or at least the blocking part.
