I just had to install That crappy vista O/S (due to an unlicensed copy of XP and retailers out here not selling XP anymore) and I can't get renegade to run, my spec's are as follows.

Vista 32-bit O/S

Asus cross hair mobo

AMD6000 dual core processor

2G ram OZ platinum

8800GT-X video card

I go to double click game icon from desktop and the welcoming renegade CnC window pops up then that evil window message pops up saying the following

" Renegade has stopped working...A problem has caused the program to stop working correctly. Windows will close the program and notify you if a solution is available" (I have attached a SS of the windows error window)

I should also note that I have Renegade (game.exe) running in Admin. mode as well as in the XP sp2 Compatibility all patches up 2 CP2, I have NOT installed RG (game2.exe) yet, as there seams to be no point on it yet.

Thats it then you can only click the close button.. no Error codes nothing ... What kinda junk is this...

HELP thanks k_os
