They are simple to make i dont know the total script code but by adding certain codes and stuff you can easily make a drop script to drop

[list]

[\*] Invinclible tanks

[\*] Any tank

[\*] Any tank anywhere on a map set by co-ordinates

[\*] Drop AI

[\*] can asign things to vehicles to get them to follow you, like my friends mod killer buggies

[/list:u]

All together there not all that usefull, if you really wanted with a drop script you can even get a mammoth to drop off a orca or if you want or vice versa.
