bad news i had a hardware failure, and 2 out of 3 of my hhds crashed and lost all data. I lost all my current work I have done in the past year lucky i was able to backup my map and some of my others works but i wont be able to get anything done soon unless my data wasn't erased on my D hdd where all my ren stuff was at. c drive lost all data which was just games and windows and something weird happend to my e drive which was more ren stuff and games. 1tb of space lol. now i get hours of fun reinstalling everything , and a unknown reason for crash least there not fried.

Edit: think they crashed cause c and e where on raid 0 or 1 and d was not , from now on every thing i do is being backdup on my ftp
