Going with your example. Yes I made my XP crash because of something I did. If I didn't change the lock on my door my key would fit... However, I have never had any problems using my key in my normal lock. When I installed vista, my key often snapped or refused to engage the pins on the lock, that is why I dislike vista.

And yet, when your key kept on snapping, you went and got the exact same incompatible type of key and expected it to not to snap instead of finding a compatible one.

Vista's kernel version is 6.0, XP's is 5.1 and 2000's is 5.0. The last major kernel version increase was from NT4 to Windows 2000 and that broke ALOT more drivers/programs. Heck, the last major OS switch for the consumer side was ME to XP, which broke *all* the device drivers.

Wrong, I went out and got the proper key for the lock and it still snapped or refused to work. I installed the right drivers, I did all I could and yet things still refused to work. I shouldn't have to find special drivers so that my pen drive that works on 98SE and XP but not vista. I shouldn't have to press 50 security buttons just to make a connection to my own router.

Vista for me fails, they were so determined on making it so simple for the average user, they made it a PITA for people that know not to install dodgy files you might get sent in junk mail and whatnot.
