Well I am at work at the moment, but I am fairly sure what your asking for is not catered for in any existing scripts in 3.4.4, however it is possible, if you know some c++ and are willing to compile your own scripts.dll.

If I remember correctly (again, I am at work so I can't actually check at the moment) the engine call

Commands->Select_Weapon(obj,"name of weapon preset");

will cause the infantry unit (or any other ArmedGameObj) to select the weapon with the given name.

If I remember tonight I might write some simple infantry AI scripts which feature this behaviour and perhaps hook into my more complex AI rountines (such as target prioritisation etc) for inclusion in 4.0...
