Can I use brenbot mod list or make it so it uses brenbot

```
bool is_mod(const char *Name)
{
    ifstream file("mods.txt", ios::in);
    string tmp;
    while(file >> tmp)
    {
        if(strcmp(Name, tmp.c_str()) == 0)
        {
            return 1;
        }
    }
    return 0;
}
```
