WNxBoMbZU wrote on Sat, 20 December 2008 14:24You can also use the existing chatlog feature. Just bind a key to 'ChatHistory' via keycfg or keys.cfg
^^ if you have scripts.dll 2.9.2 or above, you can do this. The ChatHistory will take up the entire screen, and you'll be able to control the scroll. However, that screen won't update with new messages until you exit and re-enter.
