I'm still using my dlink 524 wireless router/switch for the past like 5 (maybe 6? idk ) years and really have had no trouble with it. It's in the basement, in a closed room and im on the third floor and data transfer rates FROM wireless TO wireless i still hit about 2mbit , and when transferring FROM wireless to wired i get 10mbit. My internet speed is only a 1mbit down so have had no troubles handling that with 4 devices connected at the same time.
