Caveman wrote on Mon, 05 January 2009 09:36I dont know why they said you would need a cat 6 cable because thats just a lie. Basically ANY router that has Wireless G (which is all, well that you can purchase from a store) will give you everything you need with the speed you require. Even Wireless B which is like 5 years old is still quick enough to max out your home cable connection. I told you that before.

So stick with G not a N router?
