Subject: Game installers?

I am currently trying to create a new installation for C&C Renegade, since I don't want to 'scratch my discs' anymore. In other words, I'm just sick of the whole Westwood installer with the goddamn movie at the start. I don't want to wait for so long to finally install the game.

So I was wondering. What software is used for games like Frontlines: Fuel of War, Unreal Tournament 3 etc... with the splash screens, background images when installing, music and all the other amazing features.

Does anybody know? I think it's the older version of installshield wizard as it was still owned by Macrovision and not Acrezzo.

Please help me
