Hi,

I've recently built myself a new computer, and I'm having trouble installing Renegade. Immediately after launching the Setup, the application crashes with Vista's standard 'Setup has stopped working'.

I have tried running the setup under every available Compatibility mode, and using 'Run as Administrator' to no success. I have also updated my DirectX, and installed all Vista updates. I have tested the disk and disk drive in another computer (Running XP) and both work fine.

Any suggestions on solving this issue? ("Vista is crap, get another OS" isn't helpful...)

Specs: Intel Q6600 2.4 Quad, 4GB 800MHz RAM, 1GB ATI HD4670.

Regards,
thefriggi
