The only reason I would ever take VB classes is because it's a degree requirement. Funny thing this topic came up right when I decided on getting a CIS degree also, lol..

My Course Requirements CIS-131 - Database(MSAccess)

CIS-180 - Programming Logic

CIS-260 - Operating Systems: Intro

CIS-200 - VB.NET

CIS-220 - C#

CIS-295 - Structure Systems Analyst and Design

ACC-211 - Financial Accounting

CIS-120 - Intro to Computers (lols...)

MAT-172 - Finite Math

BUA-100(Survey of Business) OR ECN-250(Pr of Microeconomics)

BUA-110(Business Applications Concepts) OR CIS-121(Spreadsheet)

Because I'm going for a Bachelor's I need CIS-170 and CIS-270. There's more, but that'd make the spoiler too big

[/rant]

Anyway, if you want to do programming do Computer Engineering.

Toggle SpoilerIt is concerned with the study of a variety of topics including circuit design, programmable logic, computer design, computer programming, software engineering, data communication, machine intelligence, robotics, the algorithmic solutions of problems, and the various representations of information including numeric, alphabetic, visual, audio and sensory.
