I doubt you have many beta chars as far as I know only a few are around.

For the weapons:

laser rifle: pic known, there is a silverskin for the laser rifle but not a redo of the model
laser chaingun: I havent seen a pic of it but I suspect it is the same deal as the alserrifle. (I know there is a silver skin for it)
chaingun: (not much different from the standard one except a handle)
grenade launcher: This was an auto shotgun first. I have no clue about an old grenade launcher for the rest
proxymity c4: uhh? (I know there are pics of the old remotes)
rocket launcher: There are different versions of these no have been rebuild to my knowledge
tiberium rifle: havent seen a pic of that
volt rifle: havent seen a beta pic of that
personal ion cannon: havent seen a beta pic of it
and the railgun: There is according to me one screenie known and Im not sure if it is real.

+ flamethrower: I have some pics of it
chemsprayer: pics known
(And ofcourse the really old beta models m16,m4-m203, a couple of olf pistols etc)

I'm still working on some of the weapons but atm im doing some other modwork.
