It would be nice if someone could tweak the mammoth/light/medium tanks so they can be used online. The mammoth's driving speed is somewhat different from the original if correct. Also it's threads are a bit higher from the ground than usual.

The light tank has a speed issue too I think.

Medium tank, higher from the ground.

I think it's possible to get this working online, since it doesn't really give you an advantage over other players.
