Right so by the sounds of it the motherboard has be locked with its firmware so try finding an up 2 date BIOS (making sure you backup your previous one) or find a 3rd party BIOS.

On a side note. My Dual Core runs on 1.3v - 1.40 @ 125w you can get the new eco quad cores that use 0.85v 1.45v @ 95w so I dont know what your problem is?
