---

I got a new PC with Vista 64bit, and when I want to play renegade with 3.4.4 it says I need dx9. But I got dx10 so why would that not work.

I tried compatability mode/admin and stuff too.

When I try without the new scripts, I just get a BLACK screen, and nothing else. I do hear sound.

How can I get it to work?

Update: I fxed the black screen problem by using ren default scripts, and XP SP2 compatability mode. Anyway I can get the newest to work?
