---

I have a few questions about making c-130 drop scripts.

1. Is it possible to change the weapon a dropped bot is holding?
2. What is the name of the stealth black hand unit? I just need the name I know how to make him stealth and all.
3. Is it possible to change what a dropped bot drops (after you kill it)?
4. I saw someone make the c-130 fly by without swooping down. It dropped bots. How is this done?
5. What does the little -120 or some other number at the beginning of each line mean? I think it means time interval
6. How do you determine where and how far apart the bots will be when dropped?

Thanks in advance to anyone who can help me
