The big bang actually started as a sort of "energy ball", pure energy. We already know you can
convert energy into matter and the other way round.
Ah silly me, I forgot energy could be created from nothing

I'm neither a scientist or a priest, I'm just trying to point out concepts here...
neither can god be created from nothing.

The difference is, the big bang theory at least has *some* evidence. even if its nearly nothing, its
mor than nothing
