Subject: easy question about multiplayer practice

hello, I just installed renegade back on my computer after a couple years of not playing. I do not play online therefore I only play multiplayer practice, and I'm trying to mod it to make it better.

My question is, how can I edit the tree in the default multiplayer practice level? I do not know which dds file it is, I looked through all of them! I will provide a screenshot if necessary. I know how to edit the bark of the tree, I just need to know how to edit the rest. Any help would be greatly appreciated. This is driving me crazy.

Also, if anyone knows any good mods for multiplayer practice please let me know. I'm not looking for skin mods (besides the one I asked for above). I'm talking about weapon spawns, more bots, etc.

I hope someone can help me out with this
