---

i was using renegade resurrection before. some1 said i should use renguard.  
so i installed it.

now my renegade doesn't work anymore online?

=====>

when i use renguard it says:

[23:33] Warning: No WOL name found. Connecting to WOL will probably fail.

[23:33] Trying to connect to server #1...Failed!

[23:33] Trying to connect to server #2...

then says:

unable to initialize network,perhaps your firewall is incomptable with renguard

=====>

so i reinstalled renegade resurrection, and it doesnt work anymore?

says this when i open renegade now:

your version of renegade could not be determined.please report this error to [www.icefinch.net](http://www.icefinch.net)

then says continue loading renegade?

so i click yes and it crashes?

=====>

what is the issue?

and why don't you guys tell use about the small issues by the download links?

i have searched high & low to get this fixed?

please what can i do?
