Subject: Screen heavily flickering when accessing TAB info in-game
Posted by Starbuzzz on Sat, 14 Mar 2009 03:47:06 GMT

This happens everytime I press TAB twice to see the player, k/d, scores, credits....

In all servers regardless of how many players or there.

And this happens only when I have Scripts 3 installed. It does not happen when Scripts 2 is installed.

Also, after a nuke or ion beacon, the screen flickers a lot I am guessing due to the ashes and ion rain. Really messes up my map. And I have to completely shut down Ren and restart to be able to play agasin decently.

I have Directx 9. All the options like Bloom and Antializing, VSync and Shaders are disabled. I also changed resolutions but same thing.

Machine is Vista, 2 GB RAM, GeForce 7300...works great for Ren and worked great with Scripts 2 with no problems.

I really would like to have this problem solved as Scripts 3 gives me over 100 FPS and it works well with FRAPS without freezing.
