Thanks for help

heres something unrelated in way

is wpa2-psk better then normal wpa2?

in the xp laptop im trying to connect it to my network and when i choose wpa2 the part to type the encrypt key is shaded only when i selected wpa2-psk it lets me type in the password for network

I dumb question i know but no other thing ever asked me for psk just normal wpa2 so wondering if its the same thing or not
