Hey guys. I just came back to Renegade recently and found this awesome site with all the great additions, etc.

But when I connect to an actual game in Renegade, and its more than about 10 people, I constantly get that connection pending/established/pending and then usually a d/c. I've never had this problem with any other game. (WoW, the other C&C games, UT4... my average is 120 kbyte down and 90 kbyte up with 50-150 ping)I'm using The First Decade version of Renegade, if that matters at all. Anyhow:

So far, I've downloaded the core patches from this site, updated Renguard, and allowed Renegade through my firewall, and I'm still having problems.

This happens on most servers for me. Am I the only one having this? Or is this a common problem?

Thanks for any help/info you can provide me with.
