I see alot of people having trouble finding the right files which they want to edit because you can only view 1 single texture in XCCmixer.

This might help you to find it quiker.

- Open XCCMixer and select ALL .dds files.
- Click the rightmouse button
- Select 'copy'

All the skinfiles will be saved in some folder on your harddisk.

Now download the .DDS thumbnail viewer here ->

http://developer.nvidia.com/object/dds_thumbnail_viewer.html

Install it.

Now go to the folder you saved the .dds in. View them as thumbnails. Now you have a much better overview of the skins

I hope some people find this usefull
