Expand the tree as shown and click on "Modify" on that preset there 'CnC_Beacon_NukeStrike'

Since I am doing this tutorial for Nod I am using this preset.

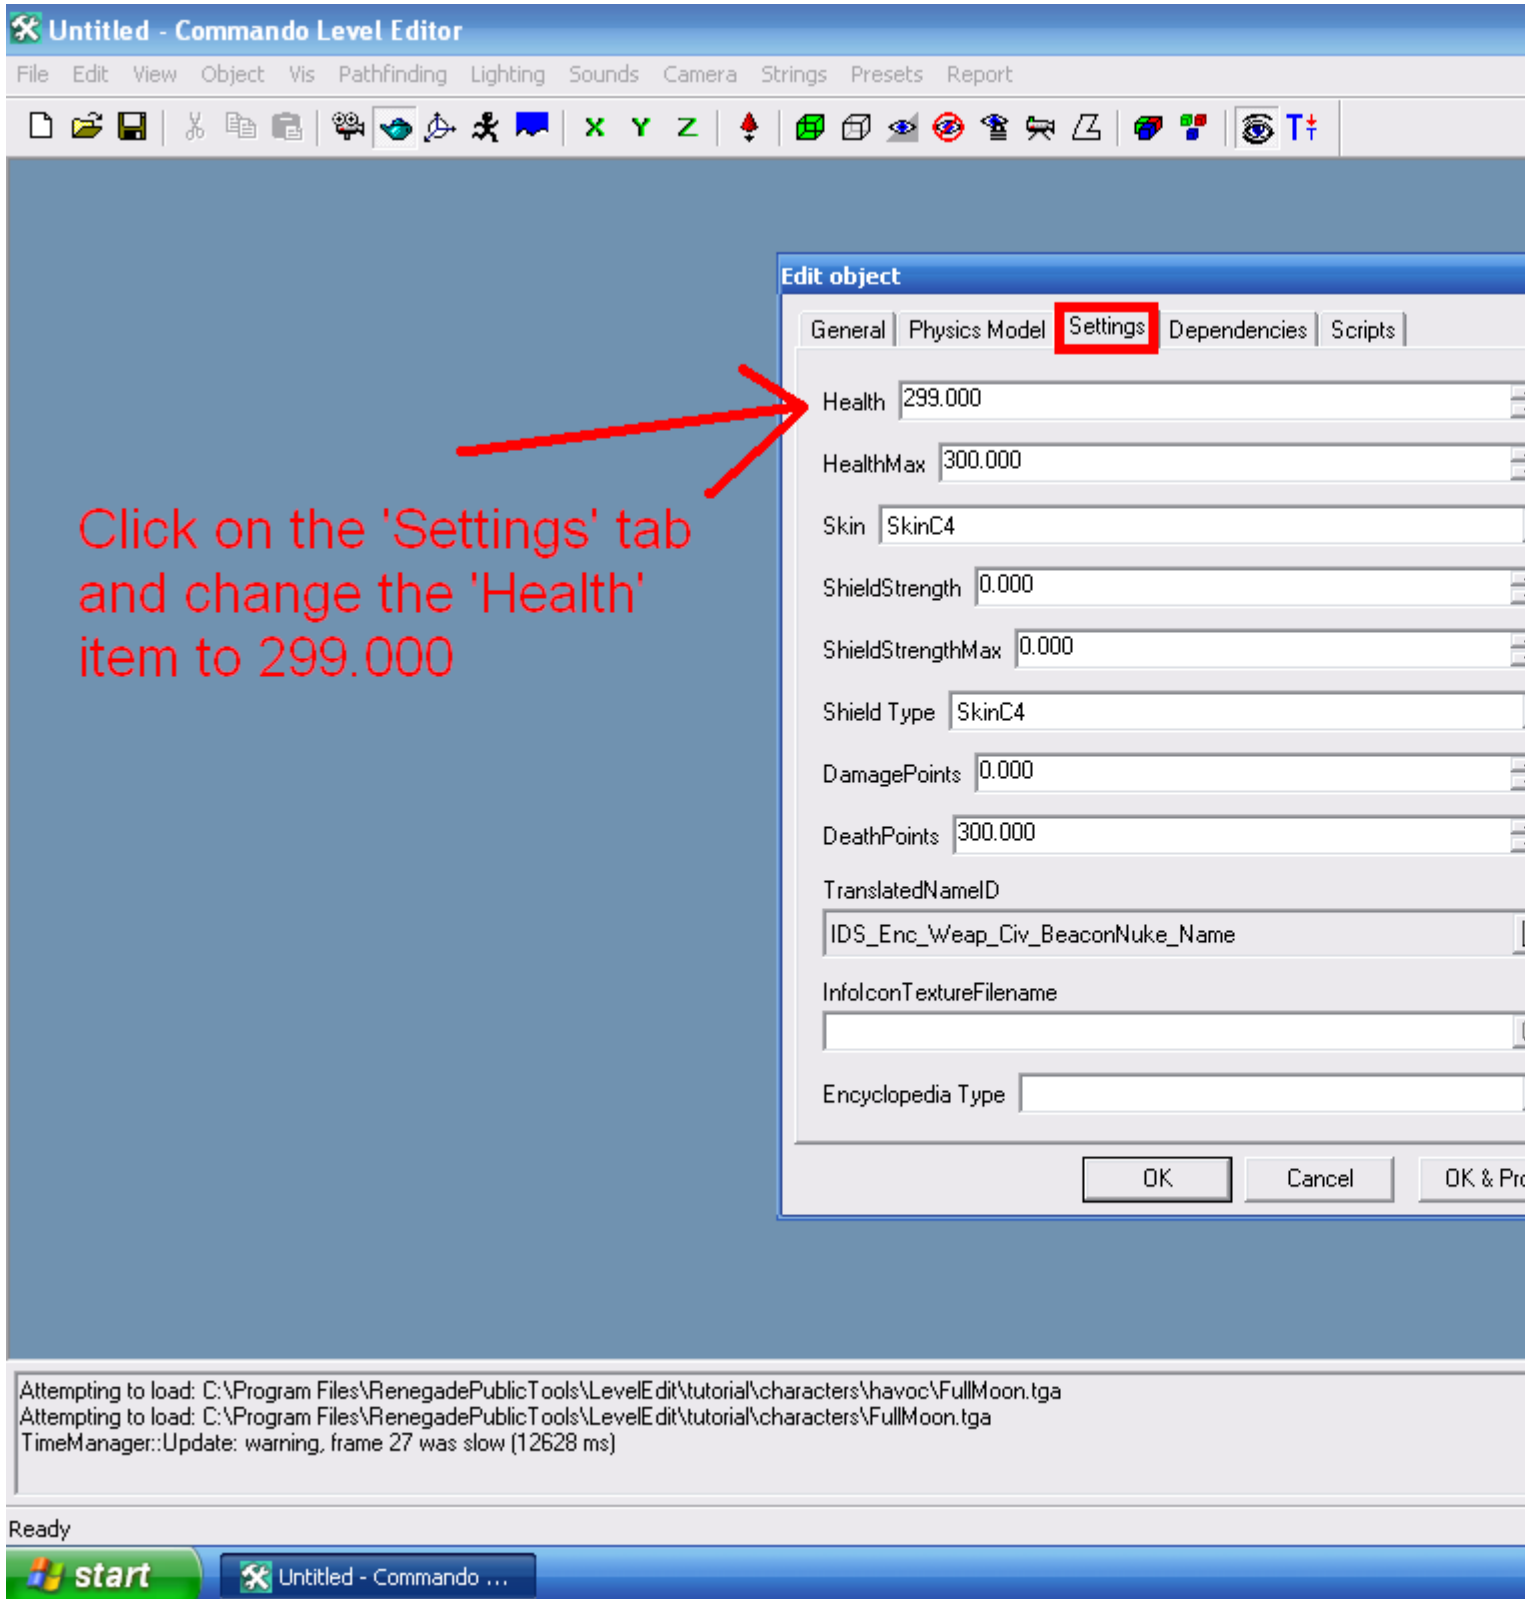

However if you would like this for GDI then expand the tree named 'Ion Cannon' and Modify the 'CnC_IONCannon_Strike' or something like that.

Now add the script 'TFX_Replace_When_Repaired'

Set the preset name to the item that you want to make (must be the exact name)

The DropHeight depends on the object I would recommend for something like a vehicle to be about 15 and for infantry to be about 8

The Health and Armor percent must be the same #'s as the object you are making.

I am making this to spawn will fill in the correct #'s for

Add the script
'M00_GrantPowerup_Created'
and then put the exact name for
the parameter. Should be
'CnC_POW_Nuclear_Missile_B
eacon'

Now once everything should be
set, exit the program and it
should give you a dialouge
asking you if you want to save
the presets library.
