So I have a Acer Aspire 5100 laptop with an AMD Turion 64 X2 TL-50 1.66 GHz processor and 2 gigs of memory. And I have an ATI Radeon Xpress series video card, either 128mb or 256mb, not sure. Vista installed. I'd say this is good enough to play renegade on a decent level. However, I do not get more than 25 fps at any given moment, at a lot of times it even drops to below 15 fps.

Any ideas how to increase my fps? I have already tried shutting down all unnecessary processes.
