yay, i found the solution, but i still encounter a problem. How do i insert textures? I've downloaded the texture pack and put it in the correct directory. Everytime i do add a texture to an object, it always gives the perimeter of the shape a different colour! I'm not after that, i'm after the texture that fill the area of the shape. For example, i tried inserting a grass in a shape but it doesnt work for me. Please guide me and help me T-T!
