---

So my Renegade disk must be scratched or something because during installation it always stalls at something like 98% and then gets an error.

I have decided now to try and play Renegade online via my TFD (the First Decade) dvd. After installing Renegade and downloading patch 1.01 and 1.02 for TFD, I get a pop up in-game that says "your current version of westwood online is incompatible with this product". I downloaded renguard instead, thinking that I could get around this loophole. There are now three game executables in my Renegade folder but with two of them I receive an error: 00000005 with the title of the error pop up being my current version of renguard (1.0323).

My question is can anyone help sort this out? My only goal is to be able to play Renegade online once more. I have a Renegade cd which freezes at the end of installation, a TFD dvd, and of course, the all powerful INTERNET.

A cookie to the first person who finds a fix.  
Thanks.
