I have a 300 W power supply which is small. <.< I will need it buy I was thinking of getting a nVidia 8500 GTS PCI 512 MB graphics card and overclocking my e1400 cerlron CPU to something like 3.5 and even 4.0 if it can go that high.

Now that I have overclocked the CPU to 3.0 I get a constant 85 FPS, never drops below.
