Omar007 wrote on Sat, 30 May 2009 12:38jnz wrote on Sat, 30 May 2009 13:32why are you converting it to std::?

Well things like COUT in some files have to start with 'using namespace std;' or i would have to change every COUT (and a few others like istream) to 'std::cout'

And about the std:: in the error screen by dos2unix.cpp: I have no clue. I haven't put it in that file

EDIT: forgot to tell that dos2unix.cpp still gives the error when i do add 'using namespace std;' so that isn't the problem

Not talking about adding "using namespace std;" I'm asking why you're converting it in the first place?
