As I reported in this thread, seems like a new "worm" going around is exploiting this apparently severe security glitch in the Windows family of operating systems.

ZDNet Special Report

Flaw in Windows worm tips off defenders

And I thought this would just settle like the dust on my computer...

Discreet needs to hurry up and get something worked out with their software. :-\

Plus, I just tried the Microsoft Windows update site, and it wouldn't load for me!
