No the dark energy forces a worm hole to expand to the size of which a human could enter it and a worm hole dosent particalize matter is makes a hole in the universe. example: say the universe is like a peice of paper. a worm holes folds the peice of paper so what the point where u are going is right on the other side of the worm hole. i learned all this from mechio kaku(spelled incorectaly), and the TLC special Hyperspace.
