---

i just asked about the 3D S3 Prosavage because thats the 1 on my family comp.

im actually thinkin of just buying some parts and making a new one by myself. cuase i already have alot of parts lieing around from old comps like power, cases, and some other stuff that wont slow down a new comp.

i just looked at my detail level and it was High, so ill put that down some.

FYI:

Gateway 400 Notebook

1.7 GHZ Celeron

384 MB SODIMM RAM (that costs a shit load)

ATI Mobility 6 32 MB
