Terminator 101 wrote on Tue, 16 June 2009 21:46I have about 4 years old computer with two partitions.

One is C - 26.6GB and D 26.9GB.

Both partitions are in Fat32, but I was thinking about converting the C (system) partition to NTFS.

I red on the NTFS website that NTFS performance is worse on small volumes, and better on large volumes. Now if I could only find out what they mean by "small" volumes. To me 26Gb seems petty small so I guess I probably won't get any benefits.

But I just wanted to hear peoples opinions.

If I remember right its true, but 26 gb is kinda big so idk
