Hi guys,

So I have a little problem on my computer trying to get Renegade to work.

It all goes smooth during installation, and installing the patch via the EA Download Manager, until I try to actually launch the game it's self.

As soon as I click Ren icon on my desktop, it shows the little Ren screen before it launches the game (or asks you insert the Play disc) a few seconds later, BOOM!

"Renegade has stopped working and needs to close"

"Microsoft will notify you if a solution is available"

Something along those lines.

I've tried re-installing but it continues to happen.

I'm on Windows Vista Home Premium, running the game in administrator mode, and besides, I disabled UAC for this anyway.

My spec should be fine for this, dual core processor, 4850hd gfx card, enough RAM.

Any ideas?

edit

oh and i'm only 32 bit.
