zunnie wrote on Sun, 28 June 2009 11:47Nope that didn't fix it neither
The exact error i get is this:

[06/28/09,02:23:23] MSXML 6.0 Parser: [2] Error code 1618 for this component means "Another installation is already in progress. Complete that installation before proceeding with this install.
I've had this once and a reboot solved it
I would also suggest using a registry cleaner like CCleaner.

You could also check that you have all necesary windows updates.

PS. Why not use VC++ 2008?

EDIT: Weird thing is it says MSXML 6.0 Parser while it seems the newest one that is pushed through Windows Update still version 4.0 SP2 is...
