I've been having some problems with level editor and thought perhaps there's something that I did wrong or is missing from it or my renegade. I'm running cp2 and scripts 3.44 with renegade working. Level editor gives glitches and won't save right (even if I open any random file and save it right away).

Is there a guide or list for level editor of what and/or how to set it up? Any links would be great.
