Naw I understand. Yeah, but anything that you can link me to anything that has to do with what I asked for in the first post. Or anything thats custom? I just want something similar to what I asked for or what Kamunix/St0rm has. Also Where can i get that !as (call Air Strike Plugin) because I heard its out in the plublic by 2 people, but you never know, it might be a lie. Please Help! Thanks for your response and Thanks for your future responses. PM me if you want to discuss this in private. Thank you again.
