Yes, RemoteAdminIP should be set to an IP, not the interface.

You're also running in LAN mode. If you want to be able to use kick set it to gamespy. This is a bug in the LFDS.

In the initial error message it reports it can't load scripts.so. You should fix that.

Could you please post the whole log for running it. Sometimes the fatal errors are higher up.

ps. Not knowing linux before attempting something like this is not wise.
