Ok. When i play renegade sometimes out of nowhere my fps goes from around 110 down to 5 or less and stays their until i restart ren or leave the game. i was just wondering if anyone knows how to fix this or if its just a bad bug. oh and my vid card is radeon 9700 pro 128mb.

p.s. if anyone knows a good pop up stopper thatd help cause they keep minimizing my renegade as well..
