jnz wrote on Sun, 19 July 2009 16:34 How do you know this? You don't, because there isn't a silly conspiracy that the government has built a matchbox sized computer with 100 teraflops of computing power.

I just noticed this. I don't know about matchbox sized, but the supercomputers on that list range from about 50 to about 1500 terraflops, so it's not crazy to think about.
