With a good heatsink based cooler, your 955 should do just fine, especially with that motherboard.

As for liquid cooling, I can't give much advice but this thread is a very good guide.

<http://www.hardwarecanucks.com/forum/guides-how-tos/8682-guide-ensuring-painless-water-cooling-setup.html>

From what I do know, you really have to know your stuff. In all honesty, unless you're going to be overclocking to the extreme, go with air-cooling. It costs quite a bit of money to pull off a liquid setup, money which could be saved, or used towards a better graphics card, or a Core i7 setup if you need more multi-tasking power.

If you go ahead and use that board with the Phenom II, can you make a post on how well it works for you? I've been looking at that same combination, and would like to know just how great it is.
