NVIDIA GeForce 512mb 8500 GT DDR2 also i got script 3.4.4 the nvidia 8400 support shaders (im using it now), so the 8500 is 99% to do, also you can turn shaders on/off ingame in the BHS.DLL menu option ok i got shaders bright white in game but not B-B shown on screen... look like there is nothing i can do with it. unless someone know better than me.

B-B as in building bars?
