---

okay, i was playing in n00bstories under PRoELiTe... guess because people seen that i got 6x MVP in a row, they would assume that i was cheating... well first off, towards people that made renguard...

can you guys please make it work for renguard windows Vista 64 bit?

built a new computer wiht OS window vista 64 bit. my last computer had window XP.

so what am i suppose to do just to play in noobstories when noobstories is one of the active servers in renegade.

6x MVP and accusing of cheating? wow, i seen other great old school players get more.

alot of people in renegade actually don't see alot of good players now days, but serious, you should have mods that are more experience with games and actually know what the difference between a cheater and a skill player.

all im saying is, even though alot of people don't give a fawk about renguard, is fix renguard so it works for window Vista 64 bit and window 7.

guess we gotta all wait for TT. but like most players know, theres always some way to go around anti-cheats, so i don't see if TT gonna help.
